

CLIMATE STEWARDSHIP POSITION

Purpose

This position formalizes our global commitment to identify, plan, and act on opportunities for our company, suppliers and products to reduce greenhouse gas (GHG) emissions and transparently report climate-related information to stakeholders. This position supports Pentair's strategy to address the potential impacts, risks, and opportunities related to changes in climate which may impact our operations, products, and businesses. This position outlines our commitment and strategy to address climate change adaptation and mitigation, in alignment with Pentair's Sustainability Strategic Targets focused on climate and products.

Scope

This position is applicable to all Pentair products and globally controlled operations. It specifically addresses our Sustainability Strategic Target of reducing GHG emissions within our own operations, created by leveraging tools from the Science Based Targets Initiative. Our intention is to ensure these efforts contribute meaningfully toward the global aspiration of limiting climate change to 1.5°C.

Position

Pentair is committed to reducing GHG emissions within our global operations and continuing to develop energy efficient products.

- **Products:** Pentair considers the GHG and energy impact of all new products through our sustainability scorecard, which is embedded in our product development process. This scorecard is based on lifecycle assessment methodologies and includes qualitative assessment of key environmental impacts on water, energy, GHG, resource use, and materials health. Pursuing innovation across our product portfolio remains a focus area of ours, particularly in advanced pump technologies which play a vital role in building climate resilience for residential, commercial, industrial, and municipal customers. We believe these innovations support both adaptation and mitigation of climate change impacts.
- **Operations:** We aim to reduce GHG emissions within our operations and execute our strategy focused on energy efficiency, electrification, and energy sourcing. In addition, we are focused on developing strategies to reduce the upstream impact of the materials used to produce our products (Scope 3).

Monitoring and Reporting

Pentair is committed to providing transparent public reporting of our sustainability metrics and progress against our goals and targets, including annual third-party assurance of key GHG and energy metrics. In addition, we remain dedicated to transparent reporting on climate risks and impacts by incorporating climate-related risks and opportunities into our strategic planning processes in alignment with the recommendations of the International Financial Reporting Standards (IFRS), which encompass the prior recommendations of the Task Force on Climate-related Financial Disclosures (TCFD).

Responsibility

The Vice President of Sustainability is responsible for position implementation, updates, and reporting results.
