

PRODUCT SUSTAINABILITY POSITION

Purpose

This position establishes the principles of Pentair's Product Sustainability strategy, focused on energy and materials efficiency. This position supports Pentair's approach to addressing the potential impacts, risks, and opportunities related to Pentair products across the product lifecycle, including key areas of water and climate, and aligns with Pentair's product-focused Sustainability Strategic Target.

Scope

This position is applicable to all Pentair products globally.

Position

Pentair's purpose is to create a better world through smart, sustainable water solutions, and Pentair has a strong legacy of developing innovative products supporting sustainability in the industries we serve. Pentair products play a vital role in numerous residential, commercial, industrial, and municipal applications which contribute to addressing climate resilience, water quality, and water scarcity. In addition to the vital role Pentair products play in moving, improving, and enjoying water, we are also conscious of the environmental impact of our products throughout all phases of the lifecycle. While different products have distinct impacts at certain phases of their lifecycle, energy consumption, materials use, and operational efficiency as key environmental considerations.

- **Products:** Pentair considers the environmental impact of all new products through our sustainability scorecard, which is embedded in our product development process. This scorecard is based on life cycle assessment methodologies and includes qualitative assessment of key environmental impacts on water, energy, greenhouse gas (GHG), resource use, and materials health across key lifecycle phases (supply chain, manufacturing, use, and end-of-life). This scorecard integrates lifecycle assessment methodologies to provide quantitative comparisons relative to benchmark.
- **Operations:** We aim to advance efforts in reducing GHG emissions across our operations and develop strategies to reduce emissions related to product manufacturing and the procurement of materials as part of our commitment to reducing impact across the lifecycle.

Monitoring and Reporting

Pentair is committed to providing transparent public reporting of our sustainability metrics and progress against our goals and targets, including annual third-party assurance of key GHG and energy metrics, which include numerous metrics related to our products. We plan to report on use of the sustainability scorecard and develop other product sustainability related metrics.

Responsibility

The Vice President of Sustainability is responsible for position implementation, updates, and reporting results.
