WATER AFFECTS YOUR PROFITS

The first and last impressions of your business that a client typically has are the drinks that you serve. If the taste and odor of the water, ice, fountain and coffee are not as they should be, customers will notice and this is not a good way to impress them and make them return.

Water carries a large amount of chemicals, sediment and dissolved minerals that can affect the function and service life of all types of water-using foodservice equipment. Corrosion, the formation of scale and energy waste can be reduced or eliminated with proper water treatment.

WATER AFFECTS CUSTOMER SATISFACTION

Think about the following:

- Fountain beverages are 83% water
- Coffee is 99% water
- Ice is 100% water

Did you know that hard water scale formed on your foodservice equipment can reduce energy efficiency consumption by 50% or more?

We are **WATER YOU CAN TRUST®**. Whether you need filtration, softening or reverse osmosis, we are likely to have a solution. After all, our mere existence revolves around providing water of premium, uniform quality for all water-using foodservice applications. That is why so many operators rely on us to solve their water-related problems. In fact, Pentair has been the leading global provider of water quality for the foodservice industry for more than 85 years.

Pentair Everpure solutions offer:

Uniformity. Everpure products reduce minerals, unwanted chemicals and particles so that your water is clean, always.

Security. It is proven that Everpure products are effective. That is why you can find our products in foodservice operations throughout the world.

Satisfaction. Everpure water is superior in all aspects, which helps you achieve a more cost-effective, high-performance operation and a better overall experience for your customers.

APPLICATION GUIDELINE

Ambient carbonation versus cold carbonation:

- If a carbonator is placed before the water is chilled using a cold plate, the associated term is ambient carbonation.
- When it is placed post-chilling, it is cold carbonation. Water that is cold absorbs CO₂ better so drinks will have more fizz.

System sizing guidelines: Our system sizing guidelines are approximations based on properly installed equipment, average usage at normal operating flow rate and average water conditions. These guidelines are designed to give you approximately six (6) months of use between filter cartridge changes. Variations in equipment usage and/or incoming water conditions can produce different results.
